

## Preventing Sexual Abuse

Our Child Safety System is designed to prevent sexual abuse in child-serving organizations, whether at the hands of a trusted adult or another child.

METHODIST CHURCH

### THE 5-PART SAFETY SYSTEM

The 5-Part Safety System provided by MinistrySafe equips staff members and volunteers to prevent child sexual abuse. Our comprehensive approach utilizes industry-leading Training, sample policy forms and screening processes, creating layers of protection.

Annual Membership enables organizations to view and send all Trainings, order and manage Background Checks, access sample policy forms and monitor Safety System elements with the online Control Panel.

### SAFETY SYSTEM ELEMENTS

**Sexual Abuse Awareness Training** provides the foundation of an effective Safety System. When staff members and volunteers are equipped with the 'eyes to see' the abuser's grooming process, they are better equipped to protect those in their care.

**Skillful Screening Processes and Training** equip hiring managers to recognize and screen for high-risk responses from applicants, including access to state-of-the-art sample forms.

**Policies and Procedures** are marginally effective without Awareness Training. MinistrySafe provides Sample Policy Forms customized to various program offerings.

**Appropriate Background Checks** provide a necessary screening component, but there is no 'one-size-fits-all' Background Check. MinistrySafe provides seven levels of Background Checks, completed and stored online.

**Monitoring and Oversight** ensures periodic review and accountability within the System. The MinistrySafe Control Panel manages and tracks Training and Background Check completion, and captures and archives Safety System elements.
